# Get ahead of the game

## Tip the scales in your favor

Club designers have made it easier for you to launch the ball high and long by combining lightweight materials in the face and back with heavier ones in the sole. But there's another weight that also matters to ball flight.

Iron shaft weight affects the total weight of the club, which in turn affects your swing tempo, ball striking consistency, and therefore your launch.

**Shaft weights vary from 65 to 130 grams. Do you know which is best for you?**

# Practice with purpose

**Get comfortable with the uncomfortable**

Simulating uncomfortable situations during practice makes it easier to respond positively – both mentally and physically – when you're faced with the same challenges on the course.

---

*Have you practiced plugged bunker lies?*

---

*Or hitting iron shots off sloping lies?*

Which part of your game most needs improving and will have the biggest impact on your enjoyment and scorecard?

We're here to help you.

**Let's talk practice >**
