Do you check your alignment?

#golfteamwork

Our **Junior Ignition** class learned all about how to help each other with their alignment and why it is so important for your game.

If your game is off - maybe you should ask your junior what they learned.

Or speak to us and [we can take care of you.](#)

Golf becomes more fun for the family

"Coach Nic and the Junior Ignition program has been a great investment for my 6-year-old son. I couldn't be more pleased with his progression over the past few months. Keith never swung a club other than putting around the greens a few times while his grandfather and I played a round. His understanding of the game, as well as his play, has surpassed all my expectations and I am excited to watch his development as we continue in the program. Thank you, Coach Nic, for doing such an excellent job with Keith, and we will take full advantage of all the hard work you have put in for years to come.

I am looking forward to future Father and Son golf games that in my opinion will be priceless. Thanks again." ~

KC Cox

Tell us about how you have enjoyed playing golf with your family since the kids have taken up lessons through
RNGA!

Shafts and myths

Let's bust some myths and misunderstandings

You may have read or heard some say that "the shaft is the engine of the golf club".

That metaphor isn't right. If there's an engine, then it's you.
You create the energy. The shaft controls and channels that energy.
The shaft is more the transmission; allowing the shaft to return the clubhead square
to the target at impact. The shaft transfers the energy you create to the clubhead.

One of the questions you have to ask yourself is: do you have the right transmission for your engine and vehicle?
Are you maximizing the return on the energy you're creating; and are you returning the clubhead square to
target at impact?

*"If you're losing distance as you get older each year, then it's really
worthwhile looking at options to create faster clubhead speed
and a better energy transfer."*

Now let's check

Ready for your transmission to be checked over? We have examples of shaft changes that have added as much
as 30 yards to tee shots. With irons, we find significant improvements in shot dispersion.

How good could you be?

Talent is overrated

Geoff Colvin, in his theory of "Deliberate Practice", contends that you can all be so much better at golf,
and much quicker than you imagine, with a better approach to practice.

This isn't about beating balls until your hands bleed.
It's about having a sensible structure that accommodates the commitment you feel you can make.
There are four essential steps according to Colvin's principals:

A personal plan that starts from your current reality, identifying the areas you can most easily improve, quickly.

Go beyond your comfort zone, practicing shots you are not comfortable with. Choosing to hit shots you can't execute consistently or adequately might not seem like fun, but you need to push your boundaries deliberately.

If you don't have a lot of time for practice, then limit the new skills you're trying to develop. You need, through repetition, to sear the new movements required into the brain.

You need continual and specific feedback. You need to record your swing in practice or have a coach present. If the result is bad, you need the diagnosis as feedback. If the result is good, you need the positive affirmation of the movements that created the result.

Start your journey. We want to help.

We want to help you on your quest for a better playing experience. Let us start you off with an assessment. Then, involve us in your progress. Let us provide feedback and guidance. Better golf shots, more often, is a great payoff.
